Market overview

- + US bonds, as measured by the Bloomberg US Aggregate Bond Index, had a positive return for the fourth quarter.
- + Changes in US interest rates and inflation risk affected fixed income valuations during the quarter. Yields on 2-year and 10-year Treasuries remained elevated, rising from 4.22% to 4.41% and from 3.83% to 3.88%, respectively. The yield curve, as measured by the yield differential between 2- and 10-year Treasuries, inverted during the quarter as short-term rates were higher than long-term rates.
- + Agency residential mortgage-backed securities (RMBS) outperformed duration-matched Treasuries for the quarter, while asset-backed securities (ABS) and commercial mortgage-backed securities (CMBS) underperformed.

Positioning and outlook

- Our short-term outlook for bond markets is cautiously optimistic:
- + Credit assets rallied throughout the quarter, headlined by attractive yields and an improving economy. Yields remain at an elevated level and valuations of credit assets have improved, along with recent economic data that show inflation is slowing. Corporate credit issuance is relatively low because companies have no need to refinance debt into a weak market, which indicates the strength of corporate balance sheets.
 - + The Federal Reserve is expected to continue its tightening of monetary policy in an effort to control inflation and slow the economy without causing a recession. The projected peak for the federal funds rate rose to 5%-5.25%, up from September's expectation of 4.6%. Additionally, the Fed continues to shrink its balance sheet. Overall, Fed policy will largely dictate how significant and long-lasting any economic downturn will be.
 - + Geopolitical risks and supply chain/energy shocks that weighed down valuations of credit assets for most of 2022 improved during the quarter due to improvement in global supply-side bottlenecks. However, China's surge of COVID-19 infections and effects on the global supply chain are worth monitoring.
 - + In terms of positioning, the fund remains overweight in investment grade issues, based on valuations and a supportive technical environment (supply/demand balance). We recently moved from an underweight to market weight in Agency mortgages because we saw attractive valuations and expect interest rate volatility to subside, which would benefit mortgage-backed securities. However, the Fed will continue to reduce its holdings of Agency mortgages as it unwinds its balance sheet, so we did not move to an overweight. We have kept the fund's duration neutral relative to its benchmark due to interest rate volatility.

Performance highlights

- + Invesco Core Bond Fund Class A shares at net asset value (NAV) had a positive return for the quarter and outperformed its benchmark, the Bloomberg US Aggregate Bond Index. (Please see the investment results table on page 2 for fund and index performance).

Contributors to performance

- + The fund benefited from security selection in the technology and banking sub-sectors.
- + Overweights in the insurance and consumer cyclical sub-sectors positively affected relative performance.

Detractors from performance

- + Security selection in the communications and capital goods sub-sectors detracted from relative performance.
- + Underweights in the consumer non-cyclical and natural gas sub-sectors detracted from relative performance.

Expense ratios	% net	% total
Class A Shares	0.71	0.82
Class C Shares	1.46	1.57
Class Y Shares	0.46	0.57

Per the current prospectus

Net = Total annual operating expenses less any contractual fee waivers and/or expense reimbursements by the adviser in effect through at least February 28, 2023 and contractual management fee waivers in effect through at least June 30, 2023. See current prospectus for more information.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com/performance](https://www.invesco.com/performance) for the most recent month-end performance.

Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. No contingent deferred sales charge (CDSC) will be imposed on redemptions of Class C shares following one year from the date shares were purchased. Performance shown at NAV does not include applicable CDSC or front-end sales charges, which would have reduced the performance. Class Y shares have no sales charge; therefore, performance is at NAV. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges. As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Oppenheimer predecessor fund. Share class returns will differ from the predecessor fund due to a change in expenses and sales charges.

1 Ratings source: Standard & Poor's, Moody's or Fitch, as applicable. A credit rating is an assessment provided by a nationally recognized statistical rating organization (NRSRO) of the creditworthiness of an issuer with respect to debt obligations, including specific securities, money market instruments or other debts. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest); ratings are subject to change without notice. If securities are rated differently by the rating agencies, the higher rating is applied. Not Rated indicates the debtor was not rated and should not be interpreted as indicating low quality. A negative in Cash indicates fund activity that has accrued or is pending settlement. For more information on the rating methodology, please visit www.standardandpoors.com and select 'Understanding Ratings' under Rating Resources on the homepage; www.moodys.com and select 'Rating Methodologies' under Research and Ratings on the homepage; www.fitchratings.com and select 'Ratings Definitions' on the homepage.

Class Y shares are available only to certain investors. See the prospectus for more information.

The Bloomberg U.S. Aggregate Bond Index is an unmanaged index considered representative of the US investment-grade, fixed-rate bond market. An investment cannot be made directly in an index.

Effective duration is a modified duration calculation which incorporates the expected duration-shortening effect of an issuer's embedded call provision. **Weighted average effective maturity (WAM)** is a measure, as estimated by the fund's portfolio managers, of the length of time the average security in a bond fund will mature or be redeemed by its issuer. It takes into account mortgage prepayments, puts, adjustable coupons and potential call dates.

About risk

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The risks of investing in securities of foreign issuers, including emerging markets, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Fixed-income investments are subject to credit risk of the issuer and the effects of changing interest rates.

Junk bonds have greater risk of default or price changes due to changes in the issuer's credit quality. Junk bond values fluctuate more than high quality bonds and can decline significantly over a short time.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

Mortgage- and asset-backed securities are subject to prepayment or call risk, which is the risk that the borrower's payments may be received earlier or later than expected due to changes in prepayment rates on underlying loans. Securities may be prepaid at a price less than the original purchase value.

Obligations issued by US Government agencies and instrumentalities may receive varying levels of support from the government, which could affect the fund's ability to recover should they default.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

Before investing, investors should carefully read the prospectus and/or summary prospectus and carefully consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund(s), investors should ask their financial professionals for a prospectus/summary prospectus or visit [invesco.com/fundprospectus](https://www.invesco.com/fundprospectus).
