Total sales charge 1.85%
Last deferred sales charge payment date 03/10/24
CUSIPs
Cash 46150H-46-7
Reinvest 46150H-47-5
Historical 12 month distribution rate\(^4\) 4.39%

Fee-based

Sales charge\(^3\)
Fee-based sales charge 0.50%
CUSIPs
Fee-based cash 46150H-48-3
Fee-based reinvest 46150H-49-1
Historical 12 month distribution rate\(^4\) (fee-based) 4.45%

Investors in fee-based accounts will not be assessed the deferred sales charge for eligible fee-based purchases and must purchase units with a fee-based CUSIP.

Objective

The Portfolio seeks to provide above-average total return by investing in a portfolio of stocks. The Select 10 Industrial Portfolio is an enhanced index\(^*\) unit investment trust that invests in a portfolio consisting of the 10 highest dividend-yielding stocks in the Dow Jones Industrial Average\(^SM\) (DJIA\(^SM\)), a nationally recognized market indicator.

All strategy performance is hypothetical (not any actual trust) and reflects trust sales charges at the beginning of each calendar year of 1.85% and expenses but not brokerage commissions on stocks or taxes.

Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and in some cases significantly higher, than the actual distribution rate achieved by the trust. The distributions paid by the trust, which will vary. Securities in which the trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the index. As a result of recent market activity, current performance may vary from the figures shown.

Returns are calculated by taking year-end prices, subtracting them from the prices at the end of the following year (adjusting for any stock splits that might have occurred during the year) and adding dividends received for the period and divided by starting price. Average annual total return and total return measure change in the value of an investment assuming reinvestment of all dividends and capital gains. Average annual total return reflects annualized change while total return reflects aggregate change and is not annualized.

Standard deviation is a measure of volatility that represents the degree to which an investment’s performance has varied from its average performance over a particular period. Standard deviation does not compare the volatility of an investment relative to other investments or the overall stock market. The more an investment’s return varies from the investment’s average return, the more volatile the investment. Standard deviation is based on past performance and is no guarantee of future results.

The Sharpe ratio is a risk-adjusted measure calculated using standard deviation on excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the historical risk-adjusted performance.

Please keep in mind that high, double-digit and/or triple-digit returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.

Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. It is not possible to invest directly in an index. The historical performance of the index is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the trust, which will vary. Securities in which the trust invests may differ from those in the index.

* An enhanced index strategy refers to a unit investment trust strategy, sponsored by Invesco Capital Markets, Inc., that seeks to outperform an index by investing in an objectively selected subset of stocks from the same index.
The marketplace, and may entail less risk than growth investing. A blend investment combines the two styles.

Value, blend and growth are types of investment styles. Growth investing generally seeks stocks that offer the potential for greater-than-average earnings growth, and may entail greater risk than value or blend investing. Value investing generally seeks stocks that may be sound investments but are temporarily out of favor in
