Invesco equity strategies

Trust specifics

Deposit information

Public offering price per unit ¹	\$10.00
Minimum investment (\$250 for IRAs) ²	\$1,000.00
Deposit date	01/14/21
Termination date	04/18/22
Distribution dates	25th day of May, August and November, commencing May 25, 2021
Record dates	10th day of May, August and November, commencing May 10, 2021

Term of trust	15 months
NASDAQ symbol	IGABFX
Historical 12 month distributions [†]	\$0.07561

LRGC211 Sales charge and CUSIPs

Brokerage

Sales charge³

Deferred sales charge	1.35%
Creation and development fee	0.50%
Total sales charge	1.85%
Last deferred sales charge payment date	10/10/21

CUSIPs

Cash	46148Q-50-4
Reinvest	46148Q-51-2
Historical 12 month distribution rate [†]	0.75%

Fee-based

Sales charge³

Fee-based sales charge	0.50%
------------------------	-------

CUSIPs

Fee-based cash	46148Q-52-0
Fee-based reinvest	46148Q-53-8
Historical 12 month distribution rate [†] (fee-based)	0.77%

Investors in fee-based accounts will not be assessed the deferred sales charge for eligible fee-based purchases and must purchase units with a Fee-based CUSIP.

[†] The historical 12 month distributions per unit and each historical 12 month distribution rate of the securities included in the trust are for illustrative purposes only and are not indicative of the trust's actual distributions or distribution rate. The historical 12 month distributions per unit amount is based upon the weighted average of the actual distributions paid by the securities included in the trust over the 12 months preceding the trust's deposit date, and is reduced to account for the effects of fees and expenses which will be incurred when investing in a trust. Each historical 12 month distribution rate is calculated by dividing the historical 12 month distributions amount by the trust's initial \$10 public offering price per unit. There is no guarantee the issuers of the securities included in the trust will declare dividends or distributions in the future. Due to the negative economic impact across many industries caused by the recent COVID-19 outbreak, certain issuers of the securities included in the trust have elected or may elect to reduce the amount of, or cancel entirely, dividends and/or distributions paid in the future. As a result, the historical 12 month distributions per unit and each historical 12 month distribution rate will likely be higher, and in some cases significantly higher, than the actual distribution rate achieved by the trust. The distributions paid by the trust, as well as the corresponding rates, may be higher or lower than the figures shown due to certain factors that may include, but are not limited to, a change in the dividends or distributions paid by issuers, actual expenses incurred, currency fluctuations, the sale of trust securities to pay any deferred sales charges, trust fees and expenses, variations in the trust's per unit price, or with the call, maturity or the sale of securities in the trust. Distributions made by certain securities in the trust may include non-ordinary income.

* An enhanced index strategy refers to a unit investment trust strategy, sponsored by Invesco Capital Markets, Inc., that seeks to outperform an index by investing in an objectively selected subset of stocks from the same index.

The Portfolio seeks to provide capital appreciation. The Portfolio seeks to achieve its objective by using an enhanced index strategy* to select an equally weighted portfolio of 40 stocks. The selection process selects 20 stocks derived from the S&P 500 Growth Index using the Large Cap Growth Strategy and 20 stocks derived from the S&P 500 Value Index using the Large Cap Value Strategy.

Performance of a hypothetical \$10,000 investment

From 12/31/92 - 12/31/20

Annual total return	Portfolio strategy	S&P 500 Index
1993	7.99%	10.06%
1994	1.20	1.32
1995	35.00	37.58
1996	22.60	22.96
1997	44.12	33.36
1998	34.68	28.58

1993 - 2020	Portfolio strategy	S&P 500 Index
Standard deviation	18.09%	17.55%
Sharpe ratio	0.55	0.45

Source: Bloomberg L.P.

The graph represents a hypothetical \$10,000 investment in the trust strategy (not any actual trust) and the S&P 500 Index from 12/31/92 through 12/31/20. The graph assumes the sum of the initial investment (\$10,000) and all dividends (including those on stocks trading ex-dividend as of the last day of the year) and appreciation during a year are reinvested at the end of that year.

All strategy performance is hypothetical (not any actual trust) and reflects trust sales charges at the beginning of each calendar year of 1.85% and expenses but not brokerage commissions on stocks or taxes. Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and because the trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the index. Returns are calculated by taking yearend prices, subtracting them from the prices at the end of the following year (adjusting for any stock splits that might have occurred during the year) and adding dividends received for the period divided by starting price. Average annual total return and total return measure change in the value of an investment assuming reinvestment of all dividends and capital gains. Average annual total return reflects annualized change while total return reflects aggregate change and is not annualized.

Please keep in mind that high, double-digit and/or triple digit returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.

Standard deviation is a measure of volatility that represents the degree to which an investment's performance has varied from its average performance over a particular period. Standard deviation does not compare the volatility of an investment relative to other investments or the overall stock market. The more an investment's return varies from the investment's average return, the more volatile the investment. Standard deviation is based on past performance and is no guarantee of future results.

Sharpe Ratio is a ratio developed to measure risk-adjusted performance. It is calculated by subtracting the risk-free rate from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns.

Selection methodology

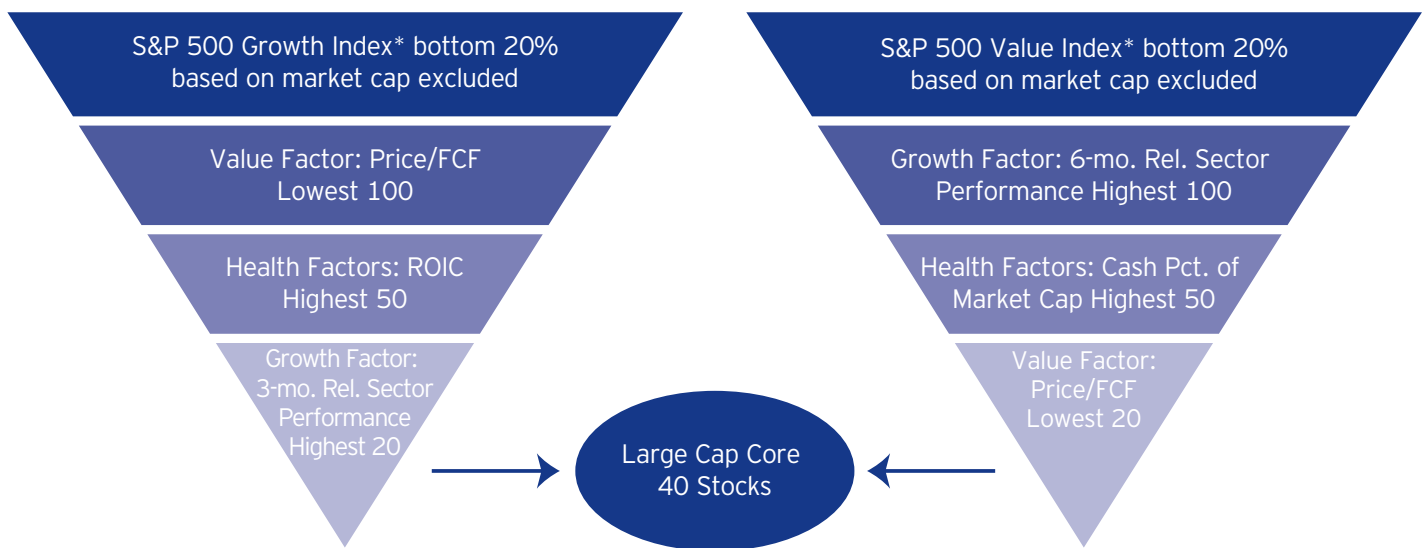

Principal Investment Strategy

Large Cap Growth Strategy:

- Step 1: Begin with the stocks in the S&P 500 Growth Index*
- Step 2: Exclude the bottom 20% of stocks based on Market Capitalization (share price multiplied by number of shares outstanding)
- Step 3: Rank the remaining stocks from the previous step based on the **Price-to-Free Cash Flow (FCF)** and exclude all but the lowest 100
- Step 4: Rank the remaining 100 stocks from the previous step based on **Return on Invested Capital (ROIC)** and exclude all but the highest 50
- Step 5: From among the 50 stocks remaining from the previous step, select 20 stocks with the highest **3-Month Relative Sector Performance** for the Portfolio

Large Cap Value Strategy:

- Step 1: Begin with the stocks in the S&P 500 Value Index*
- Step 2: Exclude the bottom 20% of stocks based on Market Capitalization
- Step 3: Rank the remaining stocks from the previous step based on the highest **6-Month Relative Sector Performance** and exclude all but the highest 100
- Step 4: Rank the remaining 100 stocks from the previous step based on **Cash Percentage of Market Cap** and exclude all but the highest 50
- Step 5: From among the 50 stocks remaining from the previous step, select 20 stocks with the lowest **Price-to-Free Cash Flow** for the Portfolio

No more than 8 of the stocks in the initial portfolio will be selected from any single economic sector (as defined by S&P's Global Industry Classification Standard ("GICS")). If any 2 stocks have the same rank after Step 5, the stock bearing the higher rank following Step 4 will be assigned the higher rank for purposes of selecting the final 20 stocks for the Portfolio. In addition, a company will be excluded and its stock will be replaced with the stock with the next highest rank through Step 5, if the company is an affiliate of the Sponsor, if there is any restriction on the Sponsor's ability to purchase a company's stock, or, if based on publicly available information as of the Selection Date, a proposed corporate action would result in it not being the surviving company following a business combination or in its security being delisted.

Price-to-Free Cash Flow—Stock price divided by last twelve months free cash flow. "Free cash flow" is net income plus depreciation and amortization and deferred income taxes; and minus capital expenditures and common and preferred dividends; all from the cash flow statement.

Return on Invested Capital—Last twelve months net income before extraordinary items divided by total capital (long-term debt plus common and preferred equity and minority interest).

3-Month Relative Sector Performance—The percentage return of the stock over the last three months relative to the median return of all stocks in its sector.

No more than 8 of the stocks in the initial portfolio will be selected from any single economic sector (as defined by GICS). If any 2 stocks have the same rank after Step 5, the stock bearing the higher rank following Step 4 will be assigned the higher rank for purposes of selecting the final 20 stocks for the Portfolio. In addition, a company will be excluded and its stock will be replaced with the stock with the next highest rank through Step 5, if the company is an affiliate of the Sponsor, if there is any restriction on the Sponsor's ability to purchase a company's stock, or, if based on publicly available information as of the Selection Date, a proposed corporate action would result in it not being the surviving company following a business combination or in its security being delisted.

6-Month Relative Sector Performance—The percentage return of the stock over the last six months relative to the median return for all stocks in its sector. In other words, a positive value for this metric would reflect that during the time frame a stock generally outperformed stocks of other companies in its sector, while a negative value would reflect that a stock generally underperformed stocks of other companies in the same sector.

Cash Percentage of Market Cap—Cash divided by market capitalization.

* For stocks included in both the S&P 500 Growth and the S&P 500 Value Indices, include only stocks with a higher "Growth Weight" than "Value Weight" for the Large Cap Growth Strategy, or with the higher "Value Weight" than "Growth Weight" for the Large Cap Value Strategy, each as provided by the Index provider.

About risk

There is no assurance the trust will achieve its investment objective. An investment in this unit investment trust is subject to market risk, which is the possibility that the market values of securities owned by the trust will decline and that the value of trust units may therefore be less than what you paid for them. Recently, an outbreak of a respiratory disease caused by a novel coronavirus, COVID-19, has spread globally in a short period of time, resulting in the disruption of, and delays in, production and supply chains and the delivery of healthcare services and processes, as well as the cancellation of organized events and educational institutions, quarantines, a decline in consumer demand for certain goods and services, and general concern and uncertainty. COVID-19 and its effects have contributed to increased volatility in global markets, severe losses, liquidity constraints, and lowered yields. The duration of such effects cannot yet be determined but could be present for an extended period of time and may adversely affect the value of your Units. This trust is unmanaged and its portfolio is not intended to change during the trust's life except in limited circumstances. Accordingly, you can lose money investing in this trust. The trust should be considered as part of a long-term investment strategy and you should consider your ability to pursue it by investing in successive trusts, if available. You will realize tax consequences associated with investing from one series to the next.

Common stocks do not assure dividend payments. Dividends are paid only when declared by an issuer's board of directors and the amount of any dividend may vary over time. There can be no guarantee or assurance that companies will declare dividends in the future or that if declared, they will remain at current levels or increase over time.

The financial condition of an issuer may worsen or its credit ratings may drop, resulting in a reduction in the value of your Units. This may occur at any point in time, including during the initial offering period.

You could experience dilution of your investment if the size of the Portfolio is increased as Units are sold. There is no assurance that your investment will maintain its proportionate share in the Portfolio's profits and losses.

The Portfolio invests primarily in stocks of large cap companies. Large cap companies are more mature and may grow more slowly than the economy as a whole and tend to go in and out of favor based on market and economic conditions.

Value, blend and growth are types of investment styles. Growth investing generally seeks stocks that offer the potential for greater-than-average earnings growth, and may entail greater risk than value or blend investing. Value investing generally seeks stocks that may be sound investments but are temporarily out of favor in the marketplace, and may entail less risk than growth investing. A blend investment combines the two styles.

GICS was developed by and is the exclusive property and a service mark of MSCI Inc. and Standard & Poor's.

The Standard & Poor's 500 Index is an unmanaged index generally representative of the U.S. stock market.

The S&P 500 Growth and Value Indices measure Growth and Value in separate dimensions across six risk factors. Growth factors include sales growth, earnings change to price and momentum; and the Value factors include book value to price ratio, sales to price ratio and dividend yield. The regular Style Index Series includes all stocks from the parent index into growth and value components, and weights them by market capitalization. It is not possible to invest directly in an index.

Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. It is not possible to invest directly in an index. The historical performance of the indices are shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the trust, which will vary.

The Portfolio is concentrated in securities issued by companies in the information technology industry. The information technology industry faces risks related to rapidly changing technology, rapid product obsolescence, cyclical market patterns, evolving industry standards and frequent new product introductions. Negative developments in this industry will affect the value of your investment more than would be the case in a more diversified investment.

1 Including sales charges. As of deposit date.

2 Represents the value of 100 units on the deposit date. The value of the minimum investment amount of 100 units may be greater or less than \$1,000.00 following the deposit date.

3 Assuming a public offering price of \$10 per unit. There is no initial sales charge if the public offering price per unit is \$10 or less. If the public offering price per unit exceeds \$10, an initial sales charge is paid at the time of purchase. The per unit amount of the initial sales charge is 1.85% of the dollar amount that the public offering price per unit exceeds \$10.

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the trust, investors should ask their advisor(s) for a prospectus or download one at [invesco.com/uit](https://www.invesco.com/uit).

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Invesco unit investment trusts are distributed by the Sponsor, Invesco Capital Markets, Inc. and broker dealers including Invesco Distributors, Inc. Both firms are indirect, wholly owned subsidiaries of Invesco Ltd.
