

Invesco Alerian Galaxy Crypto Economy ETF

SATO

Fund description

The Invesco Galaxy Crypto Economy ETF (Fund) is based on the Alerian Galaxy Global Cryptocurrency-Focused Blockchain Equity, Trusts and ETPs Index (Index). The Fund will generally invest 80% of its total net assets in securities that comprise the Index. The Index is comprised of stocks of digital asset companies, which are companies that are materially engaged in cryptocurrency, cryptocurrency mining, cryptocurrency buying, or enabling technologies and exchange-traded products ("ETPs") and private investment trusts traded over-the-counter that are linked to cryptocurrencies. The Index is computed using the net return, which withholds applicable taxes for non-resident investors. The Fund and Index are rebalanced monthly.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invesco.com](https://www.invesco.com) to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Please keep in mind that high, double-digit and/or triple-digit returns are highly unusual and cannot be sustained.

Fund inception: October 07, 2021

Not a Deposit Not FDIC Insured Not Guaranteed by the Bank May Lose Value Not Insured by any Federal Government Agency.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

¹The MSCI All Country World Index (ACWI) is designed to represent performance of large- and mid-cap stocks across 23 developed and 27 emerging markets.

Investment risks

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

Investments focused in a particular sector, such as information technology, are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The performance of an investment concentrated in issuers of a certain region or country is expected to be closely tied to conditions within that region and to be more volatile than more geographically diversified investments.

The Fund may engage in frequent trading of its portfolio securities in connection with the rebalancing or adjustment of the Underlying Index.

Many significant aspects of the U.S. federal income tax treatment of investments in cryptocurrencies are uncertain and an investment in cryptocurrencies, even indirectly, may produce income that is not treated as qualifying income for purposes of the income test applicable to regulated investment companies, such as the Fund. To the extent a Fund invests in any cryptocurrency-linked assets that generate non-qualifying income, it intends to do so through the Subsidiary.

In seeking to track the Underlying Index, the Fund may obtain investment exposure to cryptocurrencies indirectly through private vehicles that are traded over-the-counter market, such as the Grayscale Bitcoin Investment Trust ("GBTC"). An investment in these vehicles exposes the Fund to all risks related to digital currencies and those specific to private vehicles and private funds generally, which may include, but are not limited to, liquidity risk, lack of a secondary market to trade securities, management risk, concentration risk and valuation risk. Private funds are generally not registered under the 1940 Act, the Securities Act of 1933, or any state securities laws, therefore investments in such vehicles will not benefit from the protections and restrictions of such laws. To the extent such vehicles are traded, they may trade at a premium or discount to their net asset values. The Fund will indirectly pay a proportional share of the expenses of the private vehicles in which it invests, in addition to the fees and expenses the Fund already will pay to the Adviser. As a result, shareholders will absorb duplicate levels of fees with respect to the Fund's investments in such vehicles.

Certain companies in the Underlying Index may be engaged in other lines of business unrelated to blockchain and cryptocurrency and these lines of business could adversely affect their operating results. Operating results of these companies may fluctuate due to these additional risks and events in the other lines of business. Also, a company's ability to engage in new activities may expose it to business risks with which it has less experience than the traditional risks associated with its businesses. Despite a company's possible success in activities linked to its use of blockchain, there can be no assurance that the other lines of business in which these companies are engaged will not have an adverse effect on a company's business or financial condition.

Exchange-traded notes (ETNs) are subject to credit risk of the issuer, and the value of the ETN may drop due to a downgrade in the issuer's credit rating, despite the underlying market benchmark or strategy remaining unchanged.

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

The Fund's use of a representative sampling approach will result in its holding a smaller number of securities than are in the underlying Index, and may be subject to greater volatility.

The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

Companies engaged in the development, enablement and acquisition of blockchain technologies are subject to a number of risks. Blockchain technology is new and many of its uses may be untested. There is no assurance that widespread adoption will occur. The extent to which companies held by the Fund utilize blockchain technology may vary.

As blockchain technology is new, there is a risk that companies developing applications of this technology may be subject to additional risks including, but not limited to, intellectual property claims and legal action. Furthermore, blockchain technology may be subject to future law and regulation that may adversely impact adoption.

Companies transacting on the blockchain are required to manage a user's account (or "wallet") which is accessed via cryptographic keys. Mismanagement, theft, or loss of the keys can adversely affect the companies operations on the blockchain.

Blockchain technology relies on the internet, the disruption of which may adversely affect companies involved with the technology or even the blockchain itself."

While the Fund will not invest directly in cryptocurrencies, the value of a Fund's investments in cryptocurrency-linked assets (including private trusts and ETPs) is subject to fluctuations in the value of the cryptocurrency, which have been and may in the future be highly volatile. The price of a digital currency could drop precipitously (including to zero) for a variety of reasons, including, but not limited to, regulatory changes, a crisis of confidence, flaw or operational issue in a digital currency network or a change in user preference to competing cryptocurrencies.

Cryptocurrencies trade on exchanges, which are largely unregulated and, therefore, are more exposed to fraud and failure than established, regulated exchanges for securities, derivatives and other currencies.

Currently, there is relatively limited use of cryptocurrency in the retail and commercial marketplace, which contributes to price volatility.

Because the Subsidiary is not registered under the Investment Company Act of 1940, as amended (1940 Act), the Fund, as the sole investor in the Subsidiary, will not have the protections offered to investors in U.S. registered investment companies.

Glossary

30 Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

30 Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio) is the ratio of a stock's market price to a company's net asset value.

Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio) is the share price divided by earnings per share. It is measured on a 12-month trailing basis.

Weighted Average Return on Equity is net income divided by net worth.

Weighted Market Capitalization is the sum of each underlying securities market value.
