Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund. The BofA Merrill Lynch Build America Bond Index tracks the performance of U.S. dollar-denominated Build America Bonds publicly issued by US states and territories, and their political subdivisions, in the US market.

The S&P Municipal Bond 50\% Investment Grade/50\% High Yield is a custom index, created by Invesco as the fund's benchmark, and is composed of the following indexes: S&P Municipal Bond Investment Grade Index (50\%) and S&P Municipal Bond High Yield Index (50\%).

1 The S&P Municipal Bond 50\% Investment Grade/50\% High Yield is a custom index, created by Invesco as the fund's benchmark, and is composed of the following indexes: S&P Municipal Bond Investment Grade Index (50\%) and S&P Municipal Bond High Yield Index (50\%).

2 S&P Municipal Bond High-Yield Index consists of bonds in the S&P Municipal Bond Index that are not rated or are rated below investment grade.

Investment risks

There are risks involved with investing in ETFs, including possible loss of money. Actively managed ETFs do not necessarily seek to replicate the performance of a specified index. Actively managed ETFs are subject to risks similar to stocks, including those related to short selling and margin maintenance. Ordinary brokerage commissions apply. The Fund's return may not match the return of the index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

The investment techniques and risk analysis used by the portfolio managers may not produce the desired results.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa. An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer’s credit rating. The values of junk bonds fluctuate more than those of high quality bonds and can decline significantly over short time periods.

Municipal securities are subject to the risk that legislative or economic conditions could affect an issuer’s ability to make payments of principal and/or interest.

The Fund may invest in municipal securities issued by entities having similar characteristics, which may make the Fund more susceptible to fluctuation.

The Fund invests in obligations, exempt from regular federal individual income taxes, of the governments of U.S. territories, commonwealths and possessions such as Puerto Rico, the U.S. Virgin Islands, Guam and the Northern Mariana Islands. As result, the Fund may be adversely affected by local political, economic, social and environmental conditions and developments, including natural disasters affecting such obligations. Certain municipalities the Fund invests in, such as Puerto Rico, have significant financial difficulties, including risk of default, insolvency or bankruptcy; and may be subject to credit rating downgrades affecting the payment of principal and interest, the market values and marketability of such municipal obligations.

Securities which are in the medium- and lower-grade categories generally offer higher yields than are offered by higher-grade securities of similar maturity, but they also generally involve more volatility and greater risks, such as greater credit, market, liquidity, management, and regulatory risks.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

A portion of the Fund’s otherwise tax-exempt income may be subject to the federal alternative minimum tax.

The Fund invests in financial instruments that use the London Interbank Offered Rate (“LIBOR”) as a reference or benchmark rate for variable interest rate calculations. LIBOR will be phased out by the end of 2021, and it’s anticipated that LIBOR will cease to be published after that time. To assist with the transition, US dollar LIBOR rates will continue to be published until June 2023. There is uncertainty on the effects of the LIBOR transition process, therefore any impact of the LIBOR transition on the Fund or its investments cannot yet be determined. There is no assurance an alternative rate will be similar to, produce the same value or economic equivalence or instruments using the rate will have the same volume or liquidity as LIBOR. Any effects of LIBOR transition and the adoption of alternative rates could result in losses to the Fund.

The Fund’s income may decline when interest rates fall if it holds a significant portion of short duration securities and/or securities with floating or variable interest rates. If the Fund invests in lower yielding bonds, as the bond’s portfolio mature; the Fund will need to purchase additional bonds, thereby reducing its income.
Based on a Master Settlement Agreement ("MSA") with 46 states and six other US jurisdictions, large US tobacco manufacturers have agreed to make annual payments to government entities in exchange for the release of all litigation claims. Several states have sold bonds backed by those future payments, including (i) bonds that make payments only from a state's interest in the MSA and (ii) bonds that make payments from both the MSA revenue and from an “appropriation pledge” by the state which requires the state to pass a specific periodic appropriation to make the payments and is generally not an unconditional guarantee of payment by a state. Settlement payments are based on factors, including, but not limited to, annual domestic cigarette shipments, cigarette consumption, inflation and the financial capability of participating tobacco companies. Payments could be reduced if consumption decreases, if market share is lost to non-MSA manufacturers, or if there is a negative outcome in litigation regarding the MSA, including challenges by participating tobacco manufacturers regarding the amount of annual payments owed under the MSA.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

The Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of the Fund's investments. As such, investments in the Fund may be less tax efficient than investments in ETFs that create and redeem in-kind.

Important information
This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund, investors should ask their financial professionals for a prospectus or download one at invesco.com

Note: Not all products available through all firms or in all jurisdictions.

Glossary

30 Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

30 Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

Credit ratings are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers. The ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: standardandpoors.com and select "Understanding Ratings" under Rating Resources and moodys.com and select "Rating Methodologies" under Research and Ratings. Source: Standard & Poor's and Moody's, as applicable.

Effective Duration is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield. This duration measure is appropriate for bonds with embedded options.
