

Invesco Defensive Equity ETF

As of Dec. 31, 2019

Fund Description

The Invesco Defensive Equity ETF (Fund) is based on the Invesco Defensive Equity Index (Index). The Fund will invest at least 80% of its total assets in securities that comprise the Index. The Index is designed to provide exposure to securities of large-cap US issuers. The Index uses a rules-based approach to select companies that potentially have superior risk-return profiles during periods of stock market weakness while still offering the potential for gains during periods of market strength. The Index is computed using the gross total return, which reflects dividends paid. The Fund and the Index are rebalanced quarterly.

Fund Data

Defensive Equity ETF	DEF
Intraday NAV (IIV)	DEFIV

Growth of \$10,000

Data beginning 10 years prior to the ending date of Dec. 31, 2019. Fund performance shown at NAV.

Fund Performance & Index History (%)

	1 year	3 year	5 year	10 year	Fund Inception
Underlying Index					
Invesco Defensive Equity Index	29.04	15.07	-	-	-
Benchmark Index					
S&P 500 Index	31.49	15.27	11.70	13.56	8.74
Fund					
NAV	28.29	14.37	10.29	12.57	8.55
Market Price	28.66	14.29	10.20	12.47	8.53

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invesco.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower. As the result of a reorganization on April 6, 2018, the returns presented reflect performance of the Guggenheim predecessor fund. Invesco is not affiliated with Guggenheim.

3-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
Invesco Defensive Equity Index	-	-	-	1.24	10.80
S&P 500 Index	1.66	0.85	0.96	1.13	12.10

Alpha, beta and correlation are that of the underlying index.

Fund Inception: Dec. 15, 2006

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Invesco Defensive Equity Index* performance prior to 10/24/2016 reflects that of the original Underlying Index, Sabrient Defense Equity Index. From 10/24/2016, forward, the Index performance reflects that of the Underlying Index, Invesco Defensive Equity Index AND IS NOT INTENDED FOR ANY THIRD PARTY USE.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The Sabrient Defensive Equity Index is composed of stocks selected from a broad universe of US stocks and American depository receipts (ADRs), based on their risk-return profiles during periods of stock market weakness and return potential during periods of market strength.

About risk

The Fund seeks to track a quantitative strategy index, which invests in securities comprising an index created by a proprietary quantitative model. The Fund's return depends on the effectiveness of the model and factors used in the model's quantitative analysis and the weightings may not accurately predict a security's value. As a result, the Fund may have a lower return than if it tracked an index based on a fundamental investment strategy, or that did not incorporate quantitative analysis.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

Investments focused in a particular industry or sector are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The Fund may engage in frequent trading of its portfolio securities in connection with the rebalancing or adjustment of the Underlying Index.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Harmonic Average** is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted Market Capitalization** is the sum of each underlying securities' market value. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

Typically, security classifications used in calculating allocation tables are as of the last trading day of the previous month.

The Global Industry Classification Standard was developed by and is the exclusive property and a service mark of MSCI, Inc. and Standard & Poor's.
