Market overview

+ The year 2020 ended with positive investor sentiment gripping capital markets and the prospect of widespread economic recovery in 2021. Surprisingly positive announcements about therapeutic treatments for COVID-19 and vaccine efficacy ushered in a persistent equity rally and a swift reversal in the characteristics driving relative performance among sectors and individual stocks. As a result of the substantial change in outlook, equity markets experienced one of their most pronounced short-term shifts from structural growth into value-oriented stocks. Global listed real estate is poised to benefit from both improved

economic prospects and enhanced capital market conditions, which helped the sector deliver very strong returns during the final quarter of the year. Companies with growth, quality and momentum characteristics had led investment performance for much of the past year as economic conditions bottomed. However, November saw a sharp pivot toward economic recovery as companies with value, high beta and high operating leverage characteristics delivered strong performance. Global listed real estate ended the year trading, on average, at a small discount to underlying net asset value.

Positioning and outlook

+ Our overall desire is to maintain a portfolio with a bias toward companies with higher quality assets, operating in supply-constrained real estate markets, with generally less leveraged balance sheets and better governance characteristics. Portfolio risk still favors allocations to specific stock opportunities where we believe attractive relative value exists. Overall earnings from real estate weakened in 2020, but we expect them to rise again in 2021. Rent collection could remain

challenging for some property companies for the first half of 2021 as lockdowns persist. Compared to the broader investment universe, cash flow security, discounted valuations relative to underlying assets and the tangible nature of the real estate asset class make it relatively attractive to diversified investors. On this basis, we view listed real estate as offering fair to attractive relative return opportunities at present, as part of a wider investment portfolio allocation.

Performance highlights

+ Invesco Global Real Estate Income Fund Class A shares at net asset value (NAV) had a positive total return but underperformed the fund's benchmark. (Please see the investment results table on page 2 for fund and index performance.)

Contributors to performance

+ The fund's common stock and fixed income holdings drove positive absolute performance, although both asset classes detracted from return relative to the fund's all equity index. However, on a country basis, the fund's underweight exposures in Germany, Hong Kong and Japan as well as security selection in Sweden and Belgium provided pockets of positive performance and added to relative return.

Detractors from performance

+ Compared to the all-equity index, the fund's fixed income holdings, which consisted entirely of preferred securities, detracted from relative return despite delivering positive absolute performance. Similarly, the fund's common stock holdings had positive returns but detracted from relative performance. Negative relative performance from the fund's common stock holdings primarily resulted from weak stock selection in the US where positive vaccine news caused investor sentiment to shift from growth to value stocks. As such, the portfolio's structural growth stocks underperformed, while underweight positioning in deep value companies in sectors such as retail, lodging, health care and residential was also disadvantageous.

Top countries	% of total net assets

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com/performance](https://www.invesco.com/performance) for the most recent month-end performance.

Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary, and you may have a gain or a loss when you sell shares. Class A shares at NAV are available only to certain investors and have no sales charge; therefore, performance is at NAV. Class Y shares have no sales charge; therefore, performance is at NAV. Class R5 shares, Class R6 shares and Class Y shares have no sales charge; therefore, performance is at NAV. On March 12, 2007, the fund reorganized from a closed-end fund to an open-end fund. Class A share returns prior to that date are those of the closed-end fund's Common shares and include the fees applicable to Common shares. Performance shown prior to the inception date of Class R6 shares and Class Y shares is that of Class A shares and includes the 12b-1 fees applicable to Class A shares. Fund performance was positively affected by a temporary 2% fee on redemptions that was in effect from March 12, 2007, to March 12, 2008. Without income from this temporary fee, returns would have been lower. Returns less than one year are cumulative; all others are annualized. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information. Index returns do not reflect any fees, expenses, or sales charges.

Class A shares at NAV and Class Y shares are available only to certain investors. Class R6 shares and Class R5 shares are primarily intended for retirement plans that meet certain standards and for institutional investors. See the prospectus for more information.

Asset allocation/diversification does not guarantee a profit or eliminate the risk of loss.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

The Custom Invesco Global Real Estate Income Index is comprised of the FTSE NAREIT All Equity REIT Index through Aug. 31, 2011, and the FTSE EPRA/NAREIT Developed Index thereafter. An investment cannot be made directly in an index. **12-month forward and trailing P/E** are calculated using weighted harmonic averaging, which helps avoid extreme results that may occur due to small relative numbers in the denominator. It doesn't exclude extreme values; instead, it reduces the effect of outliers on the aggregate calculation. The **price/book ratio** is the market price of a stock divided by the book value per share. **Return on equity** (ROE) is net income divided by net worth. The **median 12-Month Fwd. Growth Rate** is the percent change between the next twelve months' mean EPS estimate and the previous twelve months' actuals. The **three-year EPS growth rate** is a weighted average of each stock's growth rate in earnings per share (EPS). EPS is total earnings divided by the number of shares outstanding. The **five-year dividend growth rate** is the weighted average of each stock's annualized percentage rate of growth in dividend yield over five years. The three-year EPS and five-year dividend growth rates are not forecasts of fund performance.

About risk

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The risks of investing in securities of foreign issuers, including emerging markets, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Junk bonds have greater risk of default or price changes due to changes in the issuer's credit quality. Junk bond values fluctuate more than high quality bonds and can decline significantly over a short time.

Investments in real estate related instruments may be affected by economic, legal, or environmental factors that affect property values, rents or occupancies of real estate. Real estate companies, including REITs or similar structures, tend to be small- and mid-cap companies, and their shares may be more volatile and less liquid.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

Before investing, investors should carefully read the prospectus and/or summary prospectus and carefully consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund(s), investors should ask their advisors for a prospectus/summary prospectus or visit [invesco.com/fundprospectus](https://www.invesco.com/fundprospectus).
