Historical 12 month distribution rate†	2.60%

Fee-based	
Sales charge[3]	
Fee-based sales charge	0.50%
Historical 12 month distribution rate† (fee-based)	2.64%

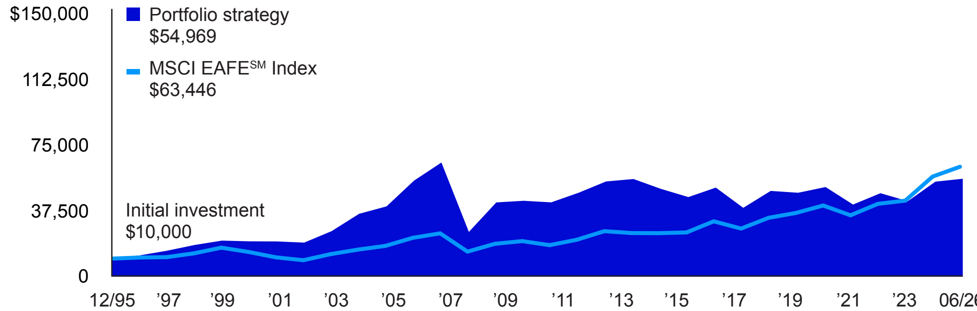
† The historical 12 month distributions per unit and each historical 12 month distribution rate of the securities included in the trust are for illustrative purposes only and are not indicative of the trust's actual distributions or distribution rate. The historical 12 month distributions per unit amount is based upon the weighted average of the actual distributions paid by the securities included in the trust over the 12 months preceding the trust's deposit date, and is reduced to account for the effects of fees and expenses which will be incurred when investing in a trust. Each historical 12 month distribution rate is calculated by dividing the historical 12 month distributions amount by the trust's initial $10 public offering price per unit. There is no guarantee the issuers of the securities included in the trust will declare dividends or distributions in the future. The distributions paid by the trust, as well as the corresponding rates, may be higher or lower than the figures shown due to certain factors that may include, but are not limited to, a change in the dividends or distributions paid by issuers, actual expenses incurred, currency fluctuations, the sale of trust securities to pay any deferred sales charges, trust fees and expenses, variations in the trust's per unit price, or with the call, maturity or the sale of securities in the trust. Distributions made by certain securities in the trust may include non-ordinary income.

Objective

The Portfolio seeks above-average total return. The Portfolio seeks to achieve its objective by investing in a portfolio of stocks. The EAFE Select 20 Portfolio is an enhanced index** unit investment trust that invests in a portfolio consisting of the highest dividend-yielding stocks from a subset of the Morgan Stanley Capital International EAFE℠ Index.

Performance of a hypothetical $10,000 investment

From 12/31/95— 06/30/26



Annual total return	Portfolio Strategy	MSCI EAFE℠ Index
1996	19.29%	6.36%
1997	22.09	2.06

2025	25.82	32.03
Thru 06/30/26	3.09	9.90

12/31/95-12/31/25	Portfolio Strategy	MSCI EAFE℠ Index
Standard deviation	22.80%	18.99%
Sharpe ratio	0.15	0.20

** An enhanced sector (or "index") strategy refers to a unit investment trust strategy, sponsored by Invesco Capital Markets, Inc., that seeks to outperform an index by investing in an objectively selected subset of stocks from the same index.

See page 2 for the footnotes on the trust specifics.

Average annual total return (for the period ended on 12/31/25)	Portfolio Strategy	MSCI EAFE℠ Index
1-Year	25.82%	32.03%
3-Year	9.62	17.93
5-Year	2.51	9.57
10-Year	0.79	8.81
15-Year	1.51	7.26
20-Year	1.52	6.18
25-Year	4.03	5.87
30-Year	5.74	6.02

Source: Bloomberg L.P.

The graph represents a hypothetical $10,000 investment in the trust strategy (not any actual trust) and the MSCI EAFE℠ Index from 12/31/95 through 06/30/26. The graph assumes the sum of the initial investment ($10,000) and all dividends (including those on stocks trading ex-dividend as of the last day of the year) and appreciation during a year are reinvested at the end of that year.

All strategy performance is hypothetical (not any actual trust) and reflects trust sales charges at the beginning of each calendar year of 1.85% and expenses but not brokerage commissions on stocks or taxes. Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and because the trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the index. Returns are calculated by taking year-end prices, subtracting them from the prices at the end of the following year (adjusting for any stock splits that might have occurred during the year) and adding dividends received for the period divided by starting price. Average annual total return and total return measure change in the value of an investment plus dividends, assuming quarterly reinvestment of dividends. Average annual total return reflects annualized change while total return reflects aggregate change and is not annualized.

Standard deviation is a measure of volatility that represents the degree to which an investment's performance has varied from its average performance over a particular period. Standard deviation does not compare the volatility of an investment relative to other investments or the overall stock market. The more an investment's return varies from the investment's average return, the more volatile the investment. Standard deviation is based on past performance and is no guarantee of future results.

Sharpe Ratio is a ratio developed to measure risk-adjusted performance. It is calculated by subtracting the risk-free rate from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns.

Please keep in mind that high, double-digit and/or triple-digit returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.

Selection methodology†

1. Start with the Morgan Stanley Capital International EAFE℠ (Europe, Australasia and Far East) Index.*
2. Assess company quality. Apply sales growth, earnings and dividend performance screens.**
3. Stocks with the highest market capitalization—the top 75 percent—are chosen.
4. Select a portfolio of the twenty highest dividend-yielding stocks.

* The strategy does not include stocks from Singapore, which in the opinion of Invesco, may be subject to undue market volatility and political instability over time or stocks which are passive foreign investment companies because of the negative tax treatment which could result from such ownership.

** Sales growth and earnings screens are defined as positive 1- and 3-year sales and earnings growth. Dividend performance screen is defined as three years of consecutive dividend growth.

† Please refer to the prospectus for a complete discussion of the selection methodology.

The trust portfolio is provided for informational purposes only and should not be deemed as a recommendation to buy or sell the individual securities shown above. Invesco unit investment trusts are distributed by the Sponsor, Invesco Capital Markets, Inc. and broker dealers including Invesco Distributors, Inc. Both firms are indirect, wholly owned subsidiaries of Invesco Ltd.

About risk

There is no assurance that a unit investment trust will achieve its investment objective. An investment in this unit investment trust is subject to market risk, which is the possibility that the market values of securities owned by the trust will decline and that the value of trust units may therefore be less than what you paid for them. This trust is unmanaged and its portfolio is not intended to change during the trust's life except in limited circumstances. Accordingly, you can lose money investing in this trust. The trust should be considered as part of a long-term investment strategy and you should consider your ability to pursue it by investing in successive trusts, if available. You will realize tax consequences associated with investing from one series to the next.

The financial condition of an issuer may worsen or its credit ratings may drop, resulting in a reduction in the value of your Units. This may occur at any point in time, including during the initial offering period.

Common stocks do not assure dividend payments. Dividends are paid only when declared by an issuer's board of directors and the amount of any dividend may vary over time. There can be no guarantee or assurance that companies will declare dividends in the future or that if declared, they will remain at current levels or increase over time.

You could experience dilution of your investment if the size of the Portfolio is increased as Units are sold. There is no assurance that your investment will maintain its proportionate share in the Portfolio's profits and losses.

The Portfolio is concentrated in securities issued by companies domiciled in Japan. As a result, political or economic developments in Japan may have a significant impact on the securities included in the Portfolio.

The Portfolio is concentrated in securities issued by companies in the financials sector. Financial services issuers are substantially affected by changes in economic and market conditions. Negative developments in the financials sector will affect the value of your investment more than would be the case for a more diversified investment.

Stocks of foreign companies in the Portfolio present risks beyond those of U.S. issuers. These risks may include market and political factors related to the company's foreign market, international trade conditions, less regulation, smaller or less liquid markets, increased volatility, differing accounting practices and changes in the value of foreign currencies.

This may magnify volatility due to changes in foreign exchange rates, the political and economic uncertainties in foreign countries, and the potential lack of liquidity, government supervision and regulation.

The MSCI EAFE℠ Index is the exclusive property of Morgan Stanley Capital International Inc. and has been licensed for use by Invesco. MSCI is a service mark of Morgan Stanley Capital International Inc. This trust is not sponsored, endorsed, sold or promoted by Morgan Stanley Capital International Inc. or Morgan Stanley & Co. Incorporated (collectively, "MS"). Neither MS nor any other party makes any representation or warranty, express or implied, to the owners of this trust or any member of the public regarding the advisability of investing in unit investment trusts generally or in this trust particularly or the ability of the Morgan Stanley Capital International EAFE℠ Index to track corresponding stock market performance.

The MSCI EAFE is an unmanaged index generally representative of major overseas stock markets. MSCI EAFE data is U.S. dollar adjusted.

Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. It is not possible to invest directly in an index. The historical performance of the index is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the trust, which will vary. Securities in which the trust invests may differ from those in the index.

1. Including sales charges. As of deposit date.
2. Represents the value of 100 units on the deposit date. The value of the minimum investment amount of 100 units may be greater or less than $1,000.00 following the deposit date.
3. Assuming a public offering price of $10 per unit. There is no initial sales charge if the public offering price per unit is $10 or less. If the public offering price per unit exceeds $10, an initial sales charge is paid at the time of purchase. The per unit amount of the initial sales charge is 1.85% of the dollar amount that the public offering price per unit exceeds $10.

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the trust, investors should ask their financial professional(s) for a prospectus or download one at invesco.com/uit.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.
