

Invesco Moderately Conservative Multi-Asset Allocation ETF

As of September 30, 2022

Fund description

The Invesco Moderately Conservative Multi-Asset Allocation ETF (Fund) is an actively managed exchange-traded fund (ETF) that seeks to provide current income and some capital appreciation by allocating through a moderately conservative investment style that seeks to maximize diversification potential. The Fund is a "fund of funds," meaning that it invests its assets in the shares of other exchange-traded funds, rather than in securities of individual companies. The Fund's target allocation of total assets: 50% to 80% in fixed income ETFs, 20% to 50% in equity ETFs and 5% to 15% in underlying ETFs that invest in foreign stocks and bonds as well as American depositary receipts (ADRs) and global depositary receipts (GDRs). Invesco Advisers Inc., the sub-adviser to the Fund (Sub-Adviser), selects investments based on quantitative and qualitative criteria to strategically allocate across broad asset classes and factors within those classes.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invesco.com to find the most recent month-end performance numbers. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

The Benchmark Indexes do not charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The Bloomberg U.S. Aggregate Index is an unmanaged index considered representative of the US investment-grade, fixed-rate bond market.

The MSCI All Country World Index is an unmanaged index considered representative of large- and mid-cap stocks across developed and emerging markets. The index is computed using the net return, which withholds applicable taxes for non-resident investors

¹The Custom Invesco Moderately Conservative Allocation ETF Index consists of 40% MSCI All Country World Index and 60% Bloomberg U.S. Aggregate Index. An investment cannot be made in an index.

Investment risks

There are risks involved with investing in ETFs, including possible loss of money. Actively managed ETFs do not necessarily seek to replicate the performance of a specified index. Actively managed ETFs are subject to risks similar to stocks, including those related to short selling and margin maintenance. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

The Fund is subject to the risks of the underlying funds. Market fluctuations may change the target weightings in the underlying funds and certain factors may cause the Fund to withdraw its investments therein at a disadvantageous time.

An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating.

The Fund typically will hold a small number of positions (approximately 10-20 Underlying ETFs). To the extent that a significant portion of the Fund's total assets is invested in a limited number of holdings, the appreciation or depreciation of any one Underlying ETF may have a greater impact on the Fund's NAV than it would if the Fund held a greater number of constituents.

Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa.

Important information

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund, investors should ask their financial professionals for a prospectus or download one at invesco.com

Glossary

30 Day SEC Unsubsidized Yield reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absence of these temporary reimbursements or waivers.

30 Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.

Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio) is the ratio of a stock's market price to a company's net asset value.

Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio) is the share price divided by earnings per share. It is measured on a 12-month trailing basis.

Weighted Market Capitalization is the sum of each underlying securities market value.
