Invesco Unit Trusts

A strategy that seeks to provide a high level of current income and to preserve capital by investing in a portfolio of investment grade corporate bonds maturing approximately 2 to 4 years from the Date of Deposit.

- Bond-like experience** – The buy-and-hold nature of a fixed income unit trust provides an investment experience similar to that of owning individual bonds, but with the added benefits of diversification, monthly income and professional selection.
- Active selection** – A unit trust's active selection process allows for the targeting of bonds with attractive yields and credit quality.
- Generations of experience** – Since 1976, Invesco Unit Trusts has deposited over 5,400 fixed income trusts, totaling \$46 billion in fixed income initial deposits. In this time, our experience and prudence has kept our corporate investments 99.80% default-free.¹

Market opportunity: tighter yield spread between long- and short-term bonds

- When it comes to fixed income investing, longer duration bonds typically command higher yields than similarly-rated lower duration bonds. This is due to the increased risk of holding a bond over a longer period of time.
- The difference between the yields of long- and short-term bonds is known as the “yield spread,” and is often used to determine the relative attractiveness among bond duration categories. Wider yield spreads indicate greater value in long-term bonds, while narrower yield spreads indicate great value in short-term bonds.
- The chart below illustrates the declining yield spread between long- and short-term corporate bonds over the last five years. Over this time, the yield spread has declined, narrowing from a difference of 1.83% down to a 1.21%.

Source: FactSet Research Systems, Inc. (1/31/2015-1/31/2020) – Chart displays the yield spread between the ICE BofAML US Corporate (3-5 Year) and the ICE BofAML US Corporate (10+ Year) indices.

2 As of Dec. 31, 2019 through Invesco Unit Investment Trusts and predecessor firms.

About risk

There is no assurance that a unit investment trust will achieve its investment objective. An investment in this unit trust is subject to market risk, which is the possibility that the market values of securities owned by the trust will decline and that the value of trust units may therefore be less than what your clients paid for them. This trust is unmanaged. Accordingly, your clients can lose money investing in this trust. An investment in the trust should be made with an understanding of the risks associated therewith, such as the inability of the issuer to pay the principal of or interest on a bond when due, volatile interest rates, early call provisions and changes to the tax status of the bonds.

The actual trust portfolios may be concentrated in certain types of bond issues. To the extent an actual portfolio does so, it is more susceptible to economic, political, regulatory and other occurrences influencing those types of issuers.

The value of the bonds will generally fall if interest rates, in general, rise. In a low interest rate environment risks associated with rising rates are heightened. The negative impact on fixed income securities from any interest rate increases could be swift and significant. No one can predict whether interest rates will rise or fall in the future.

During periods of market turbulence, corporate bonds may experience illiquidity and volatility. During such periods, there can be uncertainty in assessing the financial condition of an issuer. As a result, the ratings of the bonds in the Trust's portfolio may not accurately reflect an issuer's current financial condition, prospects, or the extent of the risks associated with investing in such issuer's securities.

Bonds of foreign issuers present risks beyond those of U.S. issuers. These risks may include market and political factors related to an issuer's foreign market, international trade conditions, less regulation, smaller or less liquid markets, increased volatility, differing accounting practices and changes in the value of foreign currencies.

Although the underlying securities in the portfolio are rated at or above the minimum credit quality as of the date of deposit, the ratings may change after inclusion in the trust.

Trust Objective. The Trust seeks to provide a high level of current income and to preserve capital.

NOT FDIC INSURED MAY LOSE VALUE NO BANK GUARANTEE

Before investing, investors should carefully read the prospectus and consider the investment objectives, risks, charges and expenses. For this and more complete information about the trust, investors should ask their advisor(s) for a prospectus or download one at [invesco.com/uit](https://www.invesco.com/uit).

The information in the prospectus is not complete and may be changed. We may not sell these securities until the registration statement filed with the Securities and Exchange Commission is effective. The prospectus is not an offer to sell these securities and is not soliciting an offer to buy these securities in any state where the offer or sale is not permitted.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Invesco unit investment trusts are distributed by the sponsor, Invesco Capital Markets, Inc. and broker dealers including Invesco Distributors, Inc. Both firms are indirect, wholly owned subsidiaries of Invesco Ltd.
