Disclosure

Definitions

Average Credit Rating - An internal measurement created by Invesco Managed Accounts LLC and is calculated by taking the highest rated of the 3 major rating agencies (S&P, Moody's, and Fitch) at the security level. It is then changed into a numerical value, asset weighted and then calculated to be shown at the portfolio level in Standard & Poor's format. Not-rated securities are not included in the average credit rating calculation.

Coupon - The average rate of the coupons of the bonds in the portfolio, weighted based on each holding size relative to the portfolio.

Completion Fund - A no-fee mutual fund to give SMA clients access to high-yield municipal sectors that cannot be efficiently held as individual securities within a standard account. The Invesco SMA Municipal Bond Fund is a no-fee fund for exclusive use in Income Plus SMAs. Portfolio breakdowns are calculated using a weighted average of all individual positions including the portfolio statistics for the completion fund which is a weighted average of all the underlying holdings in the fund.

Current Yield - Calculated by dividing the annual coupon payment by the bond's current market price.

Effective Duration - Calculation for bonds with embedded options that takes into account that expected cash flows fluctuate as interest rates change. This figure is expressed in years.

High Yield Bonds - Rated below investment grade, as defined by S&P BB or below. High yield securities involve greater risk and are less liquid than higher grade issuers. Changes in general economic conditions, financial conditions of the issuers and in interest rates may adversely impact the ability of issuers to make timely payments of interest and principal.

Taxable Equivalent Yield (TEY) - Is the return that a tax-exempt bond needs to possess for its yield to equal the yield on a comparable taxable bond. This is a tool investors can use to compare the returns between a tax-free and taxable bond alternative. It is calculated by taking the tax-free bond yield and dividing it by one minus the tax rate.

Yield to Maturity - The yield an investor would receive if all bonds were held to maturity.

Yield to Worst - The lowest possible yield an investor can receive on a bond without the issuer defaulting.
